

Aeroview expands global coverage with rooftop-precision address data in 70+ countries and postal code polygons in 100+ countries

Toronto, Canada – November 14, 2025 – Aeroview Technologies Inc., a pioneer in geospatial data and remote sensing, announces a major expansion of its location intelligence portfolio. Aeroview now provides rooftop-precision, verified address data across more than 70 countries, alongside postal code polygon coverage in over 100 countries. This global footprint gives developers, data scientists, and GIS teams access to high-accuracy location data that is refreshed monthly for mission-critical applications.

“With our Verified Rooftop Address Points and global postal polygon coverage, Aeroview sets a new benchmark for geospatial data quality, scale, and accessibility,” said Cameron Hutchison, CEO of Aeroview. “Whether you are optimizing delivery routes, automating property valuations, or powering urban analytics, your teams can count on our precision and consistency - updated every month.”

What’s New:

- [70+ countries of verified address points](#) - true-rooftop placement with continuous monthly refresh
- [100+ countries of postal code polygons](#) - clean, production-ready boundaries for search, analytics, and routing
- Multiple delivery options - robust APIs or bulk downloads for seamless integration

Technical Highlights:

- True rooftop geocoding - API-accessible, spatially verified, and mapped to the centroid of each building structure
- Monthly delta updates - automated change detection and new-construction tracking
- Plug-and-play integration - RESTful API and GIS-ready formats (GeoJSON, CSV, Shapefile)
- Built for scale - billions of records with rigorous QA for international address normalization and deduplication
- Data lineage and confidence scoring - audit-ready and compliance friendly

Aeroview is committed to empowering engineering teams and product owners with fresh, accurate, and transparent geolocation data - fueling innovation in logistics technology, insurance risk modeling, digital mapping, and AI-driven analytics.

Availability

Aeroview’s global address points and postal code polygons are available now. Developers can access sample data, interactive API docs, and onboarding support by contacting Aeroview directly.

About Aeroview

Aeroview is at the forefront of geospatial intelligence, delivering geospatial data, services, and verified address solutions globally. Aeroview’s solutions help organizations leverage precise, actionable location data at scale.
